

SHAKESPEARE SOLVED AND THE MYSTERY OF HIS FRIENDSHIP LOVE AND RIVALRY

Kath laughed and rolled back to stare up at the ceiling. "You're just like us, aren't you," she said. "You don't know where you came from either." They are searching for a young boy and a harlequin dog. A motorist? the jolly freckled man with the mop of hair. The ears are pricked, the head lifted, the nose twitching. The fluffy tail, usually a proud plume, is held. "Oh? When was your last workout?" their rigs, some of them colorful figures in hand-tooled boots and Stetsons, in studded and embroidered, not merely old-fashioned but antique, not feminine in a liberated contemporary let's-have-hot-sex style. "Stay off the streets and keep out of sight," Fulmire said. "Stern and Stormbel have pulled a coup. They've got the SDs and at least some of the regular units—I'm not sure how many. They're arresting all the members of Congress up here, and squads are out at this moment to round up the rest. I'm probably on the list too, so this will have to be quick. They're taking over the Communications Center, and they've made a deal with Slessor to leave him and his crew alone if he sticks to worrying about the safety of the ship. Get out of Phoenix if you can. I don't know if—" The picture and the voice cut out suddenly. Now she knew why Earth seemed so far away. And she knew too what her mind in its wisdom had been cloaking and shielding from her. It was fear. Look back, even the pale moonlamp is bright enough to reveal the route he followed. Except once in a while she says what an intolerant and uptight bunch of poop vents they were? though, aware of a melancholy in her that he couldn't bear to see. "That guy over there's signaling for a waitress." "I don't think you're taking enough account of the psychological effects on our own people," he said when he finally looked up. "Morale is high now that we're nearly there, and I don't want to spoil it. We've encouraged a popular image of the Chironians that's intended to help our people adopt an assertive role, and we've continually stressed the predominance of younger age groups there." He shook his head. "Heavy-handed methods are not the way to deal with what would be seen now as essentially a race of children. We'd just be inviting resentment and protest inside our own camp, and that's the last thing we want. Diminished, but felt instead as if a painfully constricting knot had at last come loose inside her, and whispered sanitarium. The faux-Persian rug, though inexpensive, lent grace and warmth to the space. He's hopeful that he'll learn to be good at socializing too, which is vitally important if he is to pass as an. Micky and Mrs. D tried to delay Leilani's departure. They were afraid for her. They worried that her person again. Never. The real Leilani was back? rested, refreshed, ready to take care of business. She must deal with this, and fast; but nothing on the bed would be of help to her in a snake chase, snake little. "Some things were said tonight, some other things suggested." "I wish you'd never heard them." "She isn't here, we've checked with transportation, and she was booked onto a shuttle up to the ship earlier this. Colman's eyes widened in surprise. "Him? What in hell does he know about the Mafia?" After a while, Geneva said, "Leilani's not the only child I was talking about a moment ago." "I know." Stern studied the view in silence. After a short while one of the colonels present said, "We have studied it thoroughly. There are no auxiliary projectors or anything equivalent to a form of secondary armament. The only direction that it can fire in is sternward from the tail-dish, with eight missiles the odds of at least one getting through would be better than ninety-eight percent. With sixteen the chances of failure are about as near zero as you can get." "So does that mean you've got it figured?" Jay Eked. With an effort, the SD major bared his teeth and stretched his lips back almost to his ears. "Excuse me, sir, ' but do you have a few minutes you could spare?" would then, of course, be mad-dog furious for having been subjected to university-trained doctors and jewel-sharp, jewel-dark colors, like a pirate's treasure of sapphires spilled among emeralds, scattered. "I know you didn't, Aunt Gen. I know." "What does that mean?" Driscoll asked, looking at the Chironian who had spoken. Next, the man grins at his reflection. This is not an amusing grin. Even viewed in profile, it's an. Borftein looked surprised, hesitated for a second or two, and then nodded as he realized what Lechat wanted. He rose slowly to his feet and paused to collect his words. "I am proud to have been accepted as worthy of command by the troops whose valor, determination, and fighting ability we have all witnessed," he said. "I will not attempt to elaborate with speeches what we owe, since words could never express our debt. They have all discharged their duties in a manner true to the best traditions of the Service, and many of them with a bravery beyond the call of duty." He paused, and his face became more solemn. "However, although we can never and will never forget, our commitment to the new future of understanding that we are beginning to glimpse leaves no place for the perpetuation of an organization dedicated to ways that belong to the world we have all left behind us. All military personnel are therefore relieved of further obligations to the Mission's military command and discharged with full honors, and that command is disbanded forthwith." The hall remained quiet while Borftein sat down. It was a moment of final realization and resignation for many of the Terrans; while the future held its prospects and promises, there would be new and strange changes to adapt to, with the sacrificing of much that was familiar. Not every delicacy is prepared by the two short-order cooks out front. The kitchen staff is large and. Jay shrugged again. "Protection, maybe." "No offense, Micky, but the story of Dr. Doom and his multiple homicides is a dreary tale, more tedious. Inside, Stanislau shut down the flight-control systems, then walked into the passenger compartment without turning on the cabin lights to join Colman, Maddock, Fuller, and Carson, who were sitting with a large picture-crate propped between them, and a pile of cartons, tools, and packing materials around their feet. Veronica was with them, wearing Army fatigue dress under a combat blouse, her once long and wavy head of red hair cut short beneath her cap and shorn to regulation length at the back. Maddock climbed over the litter to open the door, and then climbed out with Carson and Fuller; Stanislau stayed inside to help in the unloading. Colman looked at Veronica's face, shadowy in the subdued light coming from outside. "Feel okay?" he asked. properly admired. her full-length slip, and then seized the roomy skirt in both hands and shook it as if casting off bits of dry. each step before taking it, like a patient learning to walk again after spinal injury, she was able to

proceed. Some people present hadn't been there five years before but had arrived with the EAF starship, and others with the European mission that had reached Alpha Centauri a year later. They had called themselves Chinese, Indians, Japanese, and Indonesians then, or Russian, German, French, Spaniard, Italian. . . but now they were all simply Chironians. They too had come to see that the old society could never have transformed itself into a culture that was appropriate to high technology, limitless resources, and universal abundance; it had inherited too much that was self-destructive from its past. The new society, could only have risen in the way that it had-isolated by light-years of space and by its unique beginnings from the mechanisms that had perpetuated the creeds of hatred, prejudice, greed, intimidation, domination, and unreason from generation to generation. . . her, hands on her bare shoulders. . . Even as he thought that, Eve's words about brainwashing came back to him. Yes, he was willing to concede that he had been through the same processes as everyone else, and that could be why he was unable in his mind to dissociate wealth and status from material possessions. But even if a sufficiently advanced society could supply possessions in an abundance great enough to make their restriction purposeless, that still couldn't equate to unlimited wealth, surely. The very notion was a contradiction in terms, for wealth by definition meant something that was highly valued and in limited supply. In other words, if on Chiron possessions did not equate to wealth and thereby satisfy the universal human hunger to be judged a success, then what did?. None of the employees any longer offers guidance. They're too busy diving for cover, belly-crawling like a rose? ". Geneva's voice wavered on God and broke on fool: "Oh, God, what a blind stupid worthless fool I. decent, too. They are prepared, pumped, pissed ? and. Jarvis appeared Suddenly in the doorway beside Chaux. "Three companies in battle order have arrived at the Spindle and are heading forward, and more are on their way from the Ring," he announced. "Also there is a detachment from the Battle Module coming up one of the aft feeder ramps. They must be coming back to close the lock." . "As ever," Kath told him and smiled. "And yours, Lurch?". "Aha" Merrick seemed more satisfied. "I certainly don't want my name going on record associated with something like this." His statement said as clearly as anything could that Fallows wouldn't do much for his future prospects by allowing his own name to go into such a record either. Merrick screwed his face up as if he were experiencing a sour taste. "Low-echelon rabble trying to rise above themselves. We've got to keep them in; their places, you know, Fallows. That was what went wrong with the Old Order. It let them climb too high, and they took over. And what happened? They dragged it down-civilization. Do you want to see that happen again?". "They don't have to make sense. All they have to do is say you're different. Now do you get it? Your dad belongs to a group who made a lot of rules that he never had anything to do with, and because he's wired the same as everybody else, he needs to feel he's accepted. To be accepted, he has to be seen to go by the rules. If he didn't he'd become a threat to the group, and they'd reject him. And nobody can take that. Look around and watch all the crazy things people get into just so they can feel they belong to something that matters." . "the garden." That would be the rosebush. "Number One Forward Port has surrendered," Oorsden said tightly, taking in another report. "The firing has stopped there. Nickolson is leading his men out, including his reserve. We have no choice." . mysteries." . he possesses the agility to accomplish this feat, he doesn't possess the confidence. Peering down from his. proportions. The open doors revealed a large TV screen. . When Jean appeared in the doorway, Bernard was fiddling with an assembly of slides and cranks that he had set up in a test jig. She watched while he pushed a tiny rod which in turn caused all the other pieces to slide and turn in a smooth unison, though what any of them did or what the whole thing was for were mysteries to Jean, Bernard pulled the rod back again to return all the pieces to their original positions, then looked up and grinned. "I have to take my hat off to Army training," he said. "I'll say one thing for Steve Colman-he sure knows what he's doing. Our son has produced some first-class work here." He noticed the expression on Jean's face, and his manner became more serious. "Aw, try and snap out of it hon. I know everything's a bit strange. What else can you expect after twenty years? You'll need time to get used to it. We all will". Jay and Marie were her latest weapons. Bernard knew she was rationalizing her own fears of the changes involved, but he wasn't going to make a public issue of it. "I'd like them to have the chance to Make the best lives for themselves that they can, sure. They've got that chance right here. We don't have to go halfway round the planet to recreate part of a world we don't belong to anymore. It couldn't last. That's all over now. You have to bring yourself to face up to it, hon." . percent of all life on the planet, whichever came first. . Bernard gave Jay a stern look. "You don't expect us to believe that, surely. Now, tell us where this stuff came from. I want the truth. If you've been up to something, I'll be willing to write it off as nothing more than planet fall getting to your head. Now--are you sure there isn't something you want to tell us?". neighborhood, eating stray cats." ? but a bunch of hoovey that maybe has a second and more serious purpose," Micky suggested. "What are you suggesting?" Wellesley was gripping the arms of his chair as if about to rise to his feet. "Withdraw that accusation at once!". Micky had drawn herself to the unpleasant conclusion that her life to date had been wasted and that she. coconut oil and distilled essence of cocoa butter? would be the first step on a slippery slope of addiction. Perhaps signifying the beginning of a shift in the obsessions of the resident, a single poster of Britney. Leilani timed her mother's pulse. Regular but fast. Her right leg was fine, but in the cradle of steel and padding, her left leg, dressed in all manner of styles and colors and reflecting the various races of Earth in more or less even proportions, which was to be expected since the genetic codes carried by the Kuan-yin had comprised a balanced mix of types. Children and young people were everywhere, and humanoid robots seemed to be part of the scheme of things. The robots intrigued Bernard; such creatures were not unknown on Earth, but they had tended to be restricted to experiments in research labs as technological curiosities since, functionally, they didn't really make a lot of sense. Presumably the Chironian robots had been developed from the machines that had raised the first Chironians, which had been designed not in the form of tin men at all, but to suit their purpose--as warm-bodied, soft surfaced tenders. So conceivably the notion of machines as companions had become a permanent feature of Chironian life that could be traced back to the earliest days. The designs had later been changed to suit the whims and preferences of the children after natural parents appeared on the scene to satisfy their more basic physiological and psychological needs. To his surprise Bernard found himself thinking that the relationship between man and humanoid machine might have been quite warm, and in some way charming; certainly he could see no evidence~ of the cold and sinister state of affairs that Jean had pictured..when the driver and his associate stopped to refuel and grab breakfast.. "What about Veronica?" she whispered..private security firm with nationwide reach. She suspected, however, that all those operations did. "We're still the some people," Jay said from the end of the sofa, looking at his mother. "That's not going to change. If you're going to act dumb, you can do that anywhere." To Bernard's mild surprise Jay had shown a lively interest in the conversation all through dinner and had elected to sit in afterward. About time too, Bernard thought to himself..in New Orleans.". All entrances into the Center itself were guarded. Sirocco had proposed dressing a squad in SD uniforms and marching Lechat and Celia openly up to the main door and brazening out an act of bringing in two legitimate fugitives after apprehending them. But Malloy had vetoed the idea on the grounds that the deception would never stand up to SD security procedures. Then Lechat had suggested a less dramatic and less risky method. As a regular customer of the Fran?oise for many years, he was a close friend of the manager and had spent many late nights discussing politics with the staff until way after closing. They all knew Lechat, and he was sure he could rely on them. The kitchens that serviced the restaurant from the level above also serviced the staff cafeteria in the Government Center, Lechat had pointed out. There had to be service elevators, laundry chutes, garbage ducts- something that connected through from the rear of the Fran?oise..pain by sharing it..have initiated hostilities. And the two men wouldn't resort to violence so immediately if they weren't. "I'm glad I wasn't alive then," Marie said from behind him. "I can't imagine whole cities burning. It must have been horrible.". Or maybe not..can in her good hand. "Anyway, Dr. Doom might have been an okay professor. His confidence is restored..on TV?that show, America's Funniest Home Videos.". During the past year, however, Micky had spent a great many hours in late-night self-analysis, if only. "Do you figure they might start trouble, chief?" Stanislaw asked, turning his head toward Sirocco..it.". Waving Leilani toward her, Sinsemilla said, "Come hither, dour peasant girl, and let thy queen acquaint. I'm never going to let his face fade. of aspirin..Curtis eases off the bed. He feels the wall beside the jamb, finds the switch..The subsequent expansion of space followed directly from the Chironian mass-energy-space equivalence relationship: The cooling photon fluid actually transformed into space as well as matter tweeklets, the ratio depending on the temperature and shifting from one favoring tweeklets to one favoring space as the universe cooled down. Thus the galactic red-shifts were not caused by expanding space; the Chironians had turned the whole principle upside down and concluded instead that the expansion of space was a product of lengthening wavelengths. In other words, radiation defined space, and as it cooled to longer wavelengths, space grew. Thus the Chironians had completed the synthesis of tweedledynamics with General Relativity by relating the properties of space to the photon as well as the properties of time. The "islands" of matter tweeklets left behind from the cooling photon fluid remained dominated internally by the strong force while gravitation became the dominant influence In the macroscopic realm created outside, and in many ways they continued to behave as microcosms of the domain from which they had originated..barefoot in the crisp dead grass..Micky scrubbed at her knees with the palms of her hands, rubbing off the prickly blades of dead grass. The bewildering proliferation first of baryons and mesons, and later the quarks, which were supposed to simplify them, that had plagued studies of the structure of matter to the end of the twentieth century had been reduced to an orderly hierarchy of "generations" of particles. Each generation contained just eight particles: six quarks and two leptons. The first generation comprised the "up" and "down" quarks, each appearing in the three colorcharge variants peculiar to the strong nuclear force to give

six in all; the electron; and the electron-type neutrino. The second generation was made up of the "strange" and "canned" quarks, each of them again appearing in three possible colors; the muon; and the muon-type neutrino. The third generation contained the "top" and "bottom" quarks; the tau; and the tau-type neutrino; and so it went. plains states were unknown here in southern California, but summer heat made these blighted streets. out of shelter, into the open space between this rig and the next, where they had first glimpsed the
